

HARRIS COUNTY FWSD 51

Public Water Supply ID: TX1010238

Consumer Confidence Report

2025 CCR

HARRIS COUNTY FWSD 51

Public Water System ID: TX1010238

We are pleased to present to you the Annual Water Quality Report (Consumer Confidence Report) for the year, for the period of January 1 to December 31, 2025. This report is intended to provide you with important information about your drinking water and the efforts made by the water system to provide safe drinking water. Este reporte incluye informacion importante sobre el agua para tomar. Para asistencia en español, favor de llamar al telefono (713) 637-8835.

For more information regarding this report, contact:

Name: Terri Quebodeaux

Phone: 713-637-8835

Sources of Drinking Water

HARRIS COUNTY FWSD 51 is Purchased surface water.

Our water source(s) and source water assessment information are listed below:

Source Name		Type of Water	Report Status	Location
1 - 320 ST FINANS WAY / NEAR GST		Ground water	Yes	367 Queenstown, Houston, TX. 77015
2 - 100 UVALDE / NEAR GST	100 UVALDE / NEAR GST	Ground water	Yes	367 Queenstown, Houston, TX. 77015
3 - 14602 WALLISVILLE	14602 WALLISVILLE	Ground water	Yes	367 Queenstown, Houston, TX. 77015
4 - 320 ST FINAN'S WAY		Ground water	Yes	367 Queenstown, Houston, TX. 77015
EMERGENCY I/C W/PINE TRAILS UTILITY	CC FROM TX1010535 PINE TRAILS UTILITY	Surface water	Yes	367 Queenstown, Houston, TX. 77015
SW FROM NORTH CHANNEL WATER AUTHORITY	CC FROM TX1013092 NORTH CHANNEL WATER AU	Surface water	Yes	367 Queenstown, Houston, TX. 77015
SW FROM NORTH CHANNEL WATER AUTHORITY	CC FROM TX1013092 NORTH CHANNEL WATER AU	Surface water	Yes	367 Queenstown, Houston, TX. 77015

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791. Contaminants that may be present in source water include:

The District has conducted a lead service line inventory and found no lead pipes. A copy of the inventory may be reviewed by contacting the office at 713-637-8835.

Microbial Contaminants - such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants - such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides - which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic Chemical Contaminants - including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

Radioactive Contaminants - which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population.

Contaminants may be found in drinking water that may cause taste, color, or odor problems. These types of problems are not necessarily causes for health concerns. For more information on taste, odor, or color of drinking water, please contact the system's business office.

Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. HARRIS COUNTY FWSD 51 is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact HARRIS COUNTY FWSD 51 at 713-637-8835. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <https://www.epa.gov/safewater/lead>.

If you would like to participate in future meeting regarding water quality, please contact Terri Quebodeaux at 713-637-8835. The Board of Directors meet on the second Wednesday of each month at noon at 367 Queenstown Rd., Houston, Texas 77015.

En Espanol

Este informe contiene información muy importante sobre el agua que usted bebe. Tradúzcalo ó hable con alguien que lo entienda bien. Para asistencia en español, favor de llamar al telefono 713-637-8835.

In the tables below, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Action Level Goal (ALG): The level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum residual disinfectant level goal or MRDLG: The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Maximum residual disinfectant level or MRDL: The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Treatment Technique or TT: A required process intended to reduce the level of a contaminant in drinking water.

Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Avg: Average - Regulatory compliance with some MCLs are based on running annual average of monthly samples.

RAA: Running Annual Average.

LRAA: Locational Running Annual Average.

mrem: millirems per year (a measure of radiation absorbed by the body).

ppb: micrograms per liter (ug/L) or parts per billion - or one ounce in 7,350,000 gallons of water.

ppm: milligrams per liter (mg/L) or parts per million - or one ounce in 7,350 gallons of water.

picocuries per liter (pCi/L): picocuries per liter is a measure of the radioactivity in water.

na: not applicable.

You may be more vulnerable than the general population to certain microbial contaminants, such as *Cryptosporidium*, in drinking water. Infants, some elderly, or immunocompromised persons such as those undergoing chemotherapy for cancer; those who have undergone organ transplants; those who are undergoing treatment with steroids; and people with HIV/AIDS or other immune system disorders can be particularly at risk from infections. You should seek advice about drinking water from your physician or health care provider. Additional guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* are available from the Safe Drinking Water Hotline at (800) 426-4791."

Disinfectant Residual

All public water systems in Texas are required to disinfect drinking water to ensure control of microbial contaminants. Disinfectants are water additives used to control microbes.

Disinfectant	Year	Average Level	Unit	Range	MRDL/MRDLG Goal
Chloramines	2025	2.0	mg/L	0.5 – 4.3	4/4

Regulated Contaminants

In the tables below, we have shown the regulated contaminants that were detected. Chemical Sampling of our drinking water may not be required on an annual basis; therefore, information provided in this table refers back to the latest year of chemical sampling results.

Lead and Copper	Period	90TH Percentile: 90% of your water utility levels were less than	Range of Sampled Results (low - high)	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2021 - 2023	0.0602	0.0019 - 0.189	ppm	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2021 - 2023	1.6	0 - 2.3	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Period	Highest LRAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	13318 READS CT, HOUSTON	2025	25	17.1	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	14019 DUNCANNON, HOUSTON	2025	31	14.3	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	319 KINGS COURT, HOUSTON	2025	30	13.1	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	563 RIVERGROVE, HOUSTON	2025	30	14.4	ppb	60	0	By-product of drinking water disinfection
TTHM	13318 READS CT, HOUSTON	2025	39	25.2	ppb	80	0	By-product of drinking water chlorination
TTHM	14019 DUNCANNON, HOUSTON	2025	40	26	ppb	80	0	By-product of drinking water chlorination
TTHM	319 KINGS COURT, HOUSTON	2025	39	22.9	ppb	80	0	By-product of drinking water chlorination
TTHM	563 RIVERGROVE	2025	41	24.8	ppb	80	0	By-product of drinking water chlorination

HOUSTON							
Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ATRAZINE	4/9/2025	0.17	0.16 - 0.17	ppb	3	3	Runoff from herbicide used on row crops
BARIUM	4/9/2025	0.0559	0.0559	ppm	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
CYANIDE	12/21/2023	90	50 - 90	ppb	0	200	Discharge from steel/metal factories; Discharge from plastic and fertilizer factories
DIBROMOCHLOROMETHANE	12/4/2025	2.6	1.3 - 2.6	UG/L	0	0.06	
FLUORIDE	12/21/2023	0.27	0.26 - 0.27	ppm	4	4	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
NICKEL	4/9/2025	0.0021	0.0021	MG/L	0	0.1	
NITRATE	4/9/2025	0.79	0.76 - 0.79	ppm	10	10	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
SIMAZINE	4/9/2025	0.09	0.08 - 0.09	ppb	4	4	Herbicide runoff
Radiological Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
GROSS BETA PARTICLE ACTIVITY	12/21/2023	6.5	0 - 6.5	pCi/L	50	0	Decay of natural and man-made deposits.

PFAS	Year	Minimum Reporting Level	Range of Levels Detected	Unit of Measure
Perfluorobutanoic Acid (PFBA)	2025	0.005	0.0065 - 0.0072	Ug/L
Perfluorhexanoic Acid (PFHxA)	2025	0.003	0.0044 - 0.0048	Ug/L
Lithium	2025	9	11.7	Ug/L

PFAS are a diverse group of thousands of man-made chemicals used in a wide range of consumer and industrial products since the 1940's due to their resistance to grease, oil, water, and heat. These qualities allowed them to be applied to nearly any material, to make them water, oil, and stain resistant. PFAS

are used in fabrics, carpeting, non-stick pans, cleaning products, paints, personal care products, food-packaging, fire-fighting foams, and other products.

Additional Required Health Effects Language:

Some people who drink water containing cyanide well in excess of the MCL over many years could experience nerve damage or problems with their thyroid.

There are no additional required health effects violation notices.
